

Available for Summer 2026 Internships

I turn raw transactional data into governed models executives actually trust.

Undergraduate in AI & Data Science at Zagazig University. I design star-schema warehouses, write time-intelligence DAX, and lead small analytics teams — with the algorithmic rigor of an ICPC-qualified competitive programmer.

ICPC qualifications — Honorable Mention

01 / case studies

Architecture, not dashboards.

Two end-to-end BI builds where the model — grain, keys, and measure layer — did the heavy lifting.

Team Lead

DEPI Capstone

Power BI · DAX · SQL

UK Train Rides Analytics Platform

31,653 rail transactions modeled into a single source of truth, then surfaced as an executive summary a non-technical stakeholder can read in one screen.

01

1 fact + 5 dimension star schema with surrogate keys enforcing referential integrity across every report page.

02

Executive summary covering revenue, punctuality and demand — designed for decisions, not exploration.

03

A unified design system — color, typography, measure naming — enforced across a 4-person team so pages read as one product.

Star Schema View

DAX Measure Layer

Dim_Date

Fact_TrainRides
31,653 rows
grain: 1 ticket

Dim_Passenger
passenger_key

Surrogate keys on every dimension; the fact table holds keys and additive measures only.

Multi-page BI

Time Intelligence

BMW Global Sales Analytics Dashboard

A multi-page report over roughly \$376M in global transactions, sliced across four analytical axes with YoY time-intelligence measures and drill-through paths into individual model performance.

Geography
Region & country revenue mix

Vehicle Model
Volume, price band, drill-through

Channel
Dealer vs. direct performance

Date
YoY, YTD, rolling trend

how i work

Model first. Grain declared, keys generated, measures centralized — then visuals. It makes the report cheap to extend and impossible to contradict itself.

ECPC 2026 — ICPC Qualifications

Team 4090 at the Egyptian Collegiate Programming Contest. Honorable Mention awarded by the ICPC Foundation.

icpc foundation

Honorable Mention

Competitive programming is where the data work gets its edge: complexity awareness, edge-case instinct, and correctness under a clock.

AI Data Annotator — Outlier.ai

LLM fine-tuning work: response ranking, prompt evaluation and edge-case authoring against detailed rubrics.

graduated

DEPI Data Analysis Program

Completed with the UK Train Rides capstone, delivered as team lead across a 4-person analytics team.

undergraduate

AI & Data Science — Zagazig University

Faculty coursework in machine learning, statistics and data engineering.

open to Summer 2026 internships

Let's talk about your data model.

Happy to walk through the star schema, the DAX layer, or anything in between.
